

Horizon Kinetics Blockchain Development ETF (BCDF)

Listed on NYSE Arca, Inc.

Summary Prospectus dated July 29, 2022

Before you invest, you may want to review the Fund's prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI dated July 29, 2022, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund online at www.horizonkinetics.com/products/etf/BCDF. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The Horizon Kinetics Blockchain Development ETF (the "Fund") seeks long-term growth of capital.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fee	0.85%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.85%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$87

3 Years: \$271

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund ("ETF") that will invest primarily in equity securities of listed domestic and foreign Blockchain Development Companies (as the term is defined below), American Depository Receipts ("ADRs") and Global Depository Receipts ("GDRs"), that Horizon Kinetics Asset Management LLC, the Fund's investment adviser (the "Adviser"), expects to benefit, either directly or indirectly, from the use of blockchain technology in connection with the issuance, facilitation, custody, trading and administration of digital assets, including cryptocurrencies. A blockchain is a peer-to-peer ledger of immutable transactions consolidated into digital "blocks" of data; the "blocks" are cryptographically linked consecutively into a chronological "chain," meaning that each new block references the transactions in the previous block of data. The Fund defines "digital assets" as digital (*i.e.*, non-tangible) representations of various assets (*e.g.*, goods, resources, objects) and defines "cryptocurrency" (also referred to as "virtual currency" and "digital currency") as digital assets designed to act as a medium of exchange. **The Fund does not invest directly in cryptocurrencies or initial coin offerings and as a result, its performance does not seek to, and should not be expected to, correspond to the performance of any particular cryptocurrency.**

Blockchain Development Companies may include companies that (i) verify and add digital asset transactions to a blockchain ledger (*i.e.*, digital asset mining), or that produce technology used in digital asset mining, (ii) operate trading platforms/exchanges, asset managers, custodians, wallets, and/or payment gateways or processors for digital assets issued on a blockchain, (iii) develop and distribute applications and software services related to blockchain technology and digital assets issued on a blockchain, including smart contracts, (iv) manufacture and distribute infrastructure and/or hardware used for blockchain activities and digital assets issued on a blockchain, or (v) provide engineering and consulting services for the adoption and utilization of blockchain technology and digital assets issued on a blockchain.

In selecting individual securities for the Fund’s portfolio, the Adviser employs a value-driven, “bottom-up” or fundamental approach. The Adviser’s research and analysis leverages insights from diverse sources, including internal research, to develop and refine its investment themes for the Fund and identify and take advantage of trends that are expected to benefit individual companies or broader sub-industries. The Adviser expects to sell portfolio holdings when it determines that they no longer fit the Adviser’s investment thesis and/or are no longer attractively valued.

The Fund’s portfolio generally will include the securities of approximately 20 to 50 issuers, and those issuers may represent any combination of small-, mid-, or large-capitalization companies at any point in time. The Fund may invest in issuers in developed, emerging markets, and frontier markets. Frontier markets and emerging market countries are those countries with low- and middle-income economies, respectively, as classified by the World Bank, or included in any of the Morgan Stanley Capital International (MSCI) frontier markets or emerging markets indices.

Under normal circumstances, the Fund invests at least 80% of its net assets, plus borrowings for investment purposes, in Blockchain Development Companies. A Blockchain Development Company means a company that has (i) publicly disclosed its commitment to the development and use of blockchain technologies, (ii) organized a separate identifiable business line or legal entity for the purpose of developing and using blockchain technologies, or (iii) been defined by one or more published indices or classified by one or more industry classification schemes as a blockchain company.

The Fund also may invest in the securities of issuers the Adviser believes are actively engaged in the development and use of blockchain technologies, but which do not meet the criteria specified above in the Fund’s definition of Blockchain Development Companies, and anticipates investing in cash and cash equivalents on a day-to-day basis.

The Fund is non-diversified and therefore may invest a larger percentage of its assets in the securities of a single issuer or smaller number of issuers than diversified funds. The Fund expects to concentrate its investments in issuers in the Capital Markets Industry within the Financials Sector, as classified by the Global Industry Classification Standard (GICS®).

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its objective. The following risks could affect the value of your investment in the Fund:

- **Associated Risk of Investing in Blockchain Development Companies.** The Fund will invest in Blockchain Development Companies. At times, Blockchain Development Companies may be out of favor and underperform other industries or groups of industries or the market as a whole. In such event, the value of the Shares may rise and fall more than the value of shares of a fund that invests in securities of companies in a broader range of industries. An investment in a Blockchain Development Company may be subject to the following risks:
 - *Blockchain technology is new and many of its uses may be untested.* The mechanics of using blockchain technology to transact in digital or other types of assets, such as securities or derivatives, is relatively new and untested. There is no assurance that widespread adoption will occur. A lack of expansion in the usage of blockchain technology could adversely affect Blockchain Development Companies.
 - *Theft, loss or destruction.* Transacting on a blockchain depends in part specifically on the use of cryptographic keys that are required to access a user’s account (*or “wallet”*). The theft, loss, or destruction of these keys could adversely affect a user’s ownership claims over an asset or a company’s business or operations if it was dependent on the blockchain.
 - *Competing platforms, technologies, and patents.* The development and acceptance of competing platforms or technologies may cause consumers or investors to use an alternative to blockchains. Further, if one or more other persons, companies or organizations has or obtains a valid patent covering technology critical to the operation of one or more of a Blockchain Development Company’s business lines, there can be no guarantee that such an entity would be willing to license such technology at acceptable prices or at all, which could have a material adverse effect on the Blockchain Development Company’s business, financial condition and results of operations.

- *Cybersecurity incidents.* Cybersecurity incidents may compromise an issuer, its operations, or its business. Cybersecurity incidents may also specifically target a user’s transaction history, digital assets, or identity, thereby leading to privacy concerns. In addition, certain features of blockchain technology, such as decentralization, open source protocol, and reliance on peer-to-peer connectivity, may increase the risk of fraud or cyber-attack by potentially reducing the likelihood of a coordinated response. Additionally, blockchain functionality relies on the Internet. A significant disruption of Internet connectivity affecting large numbers of users or geographic areas could impede the functionality of blockchain technologies.
- *Emerging Technologies Investment Risk.* The Fund invests primarily to gain exposure to the emerging technologies and related activities in the blockchain and digital assets ecosystems. Companies across a wide variety of industries, primarily in the technology, finance, and entertainment sectors, are exploring the possible applications of these technologies. Blockchain technology may never develop an optimization process that may lead to increased economic returns from which the Fund seeks to benefit. The extent of such technologies’ versatility has not yet been fully explored. Consequently, the Fund’s holdings may include equity securities of operating companies that have exposure to a wide variety of industries, and the economic fortunes of certain companies held by the Fund may be significantly tied to such industries. Currently, there are few public companies for which these emerging technologies represent an attributable and significant revenue or profit stream, and such technologies may not ultimately have a material effect on the economic returns of companies in which the Fund invests.
- *Financial Technology Risk.* Companies that are developing financial technologies that seek to disrupt or displace established financial institutions generally face competition from much larger and more established firms. Such companies may not be able to capitalize on their disruptive technologies if they face political and/or legal attacks from competitors, industry groups or local and national governments. Laws generally vary by country, creating some challenges to achieving scale. A financial technology company may not currently derive any revenue, and there is no assurance that such company will derive any revenue from innovative technologies in the future. Additionally, financial technology companies may be adversely impacted by potential rapid product obsolescence, cybersecurity attacks, increased regulatory oversight and disruptions in the technology they depend on.
- *Key personnel risk.* Blockchain Development Companies rely on highly skilled financial service professionals and software engineers. Because of competition from other firms, Blockchain Development Companies may face difficulties in recruiting and retaining professionals of a caliber consistent with their business strategy in the future. The inability to successfully identify and retain qualified professionals could materially and adversely affect the growth, operations, or financial condition of the company.
- *Lack of liquid markets, and possible manipulation of blockchain-based assets.* Digital assets that are represented and trade on a blockchain may not necessarily benefit from viable trading markets. Stock exchanges have listing requirements and vet issuers, and perhaps users. These conditions may not necessarily be replicated on a blockchain, depending on the platform’s controls and other policies. The more lenient a blockchain is about vetting issuers of digital assets or users that transact on the platform, the higher the potential risk for fraud or the manipulation of digital assets. These factors may decrease liquidity or volume, or increase volatility of digital securities or other assets trading on a blockchain.
- *Lack of regulation.* Digital assets and their associated platforms are largely unregulated, and the regulatory environment is rapidly evolving. Because blockchain technology works by having every transaction build on every other transaction, participants can self-police any corruption, which can mitigate the need to depend on the current level of legal or government safeguards to monitor and control the flow of business transactions. As a result, companies engaged in such blockchain activities may be exposed to adverse regulatory action, fraudulent activity, or even failure. There can be no guarantee that future regulation of blockchain technology will not have a negative impact on the value of such technologies and of the companies in which the Fund invests.
- *Network amendment risk.* Significant contributors to any cryptocurrency network could propose amendments to the respective network’s protocols and software that, if accepted and authorized by such network, could adversely affect a Blockchain Development Company. For example, with respect to the bitcoin network, a small group of individuals contribute to the bitcoin network’s source code. Those individuals can propose refinements or improvements to the bitcoin network’s source code through one or more software upgrades that alter the protocols and software that govern the bitcoin network and the properties of bitcoin, including the irreversibility of transactions and limitations on the mining of new bitcoin. To the extent that a significant majority of the users and miners on the bitcoin network install such software upgrade(s), the bitcoin network would be subject to new protocols and software that may adversely affect Blockchain Development Companies.
- *Non-Fungible Tokens ecosystem company risk.* Non-fungible tokens (“NFTs”) act like a certificate of authenticity for a digital record. NFTs may be purchased, sold, or held as an original digital collectible for items such as digital art, music, videos, or other electronic content. The value of a NFT may decline for short or long periods of time and may be volatile due to factors such as the desirability of the particular NFT, the availability of other similar NFTs, the accessibility of the blockchain used by the NFT, and general risks applicable to Blockchain Development Companies. Volatility in the value of NFTs may have a material adverse effect on a Blockchain Development Company’s business, financial condition, and results

of operation. The NFT ecosystem includes those companies that either (i) currently operate services for the issuance, creation, and commercialization of NFTs and/or (ii) invest in or fund, or will invest in or fund, internal or external projects targeting the issuance, creation, and commercialization of NFTs that are of material importance to such company.

- *Third party product defects or vulnerabilities.* Where blockchain systems are built using third party products, those products may contain technical defects or vulnerabilities beyond a company’s control. Open-source technologies that are used to build a blockchain application may also introduce defects and vulnerabilities.
- *Reliance on cryptocurrency.* Certain Blockchain Development Companies may rely on the success of the digital currency industry, the development and acceptance of which is subject to a variety of factors that are difficult to evaluate. Though there are many applications of blockchain technology outside of the digital currency industry, digital currencies remain a key driver of interest in blockchain technology. Cryptocurrency is an emerging asset class. There are thousands of cryptocurrencies, the most well-known of which is bitcoin. Cryptocurrency generally operates without a central authority (such as a bank) and is not backed by any government. Cryptocurrency is not legal tender. Federal, state and/or foreign governments may restrict the use and exchange of cryptocurrency, and regulation in the United States is still developing. The market price of bitcoin has been subject to extreme fluctuations. Similar to fiat currencies (*i.e.*, a currency that is backed by a central bank or a national, supra-national or quasi-national organization), cryptocurrencies are susceptible to theft, loss, and destruction. Cryptocurrency exchanges and other trading venues on which cryptocurrencies trade are relatively new and, in most cases, largely unregulated and may therefore be more exposed to fraud and failure than established, regulated exchanges for securities, derivatives and other currencies. Cryptocurrency exchanges may stop operating or permanently shut down due to fraud, technical glitches, hackers, or malware, which may also affect volatility.
- *Exposure to cryptocurrency.* The Fund may have exposure to cryptocurrencies indirectly through investment in individual Blockchain Development Companies that have either direct or indirect exposure to cryptocurrencies, including cryptocurrencies other than bitcoin. To date, cryptocurrency markets have experienced extreme fluctuations and generally are characterized by significant volatility. The prices of cryptocurrencies could fall sharply (potentially to zero) for various reasons, including, but not limited to, regulatory changes, issues impacting the distributed ledger networks, events involving entities that facilitate transactions in cryptocurrency, or changes in user preferences in favor of alternative cryptocurrencies. Cryptocurrency exchanges and other trading venues on which cryptocurrencies trade are relatively new and, in most cases, largely unregulated. As a result, the prices of cryptocurrencies on exchanges may be subject to greater volatility than traditional assets traded on regulated exchanges. Cryptocurrency exchanges and other trading venues also may be more vulnerable to fraud and failure, including financial failure due to extreme market volatility, than established, regulated exchanges for securities, derivatives and other currencies. The Fund’s investments in Blockchain Development Companies with significant direct and indirect exposure to cryptocurrencies expose the Fund to all of the risks related to cryptocurrencies described above in addition to the risks related to the Blockchain Development Companies. Cryptocurrency volatility may have a material adverse effect on a Blockchain Development Company’s business, financial condition, and results of operation.
- *Line of business risk.* Some Blockchain Development Companies are engaged in other lines of business unrelated to blockchain and these lines of business could adversely affect their operating results. The operating results of these companies may fluctuate as a result of these additional risks and events in the other lines of business. In addition, a company’s ability to engage in new activities may expose it to business risks with which it has less experience than it has with the business risks associated with its traditional businesses. Despite a company’s possible success in activities linked to its use of blockchain, there can be no assurance that the other lines of business in which these companies are engaged will not have an adverse effect on a company’s business or financial condition.
- **Concentration Risk.** The Fund expects to concentrate (*i.e.*, invest more than 25% of its net assets) its investments in a limited number of issuers conducting business in the same industry or group of related industries. To the extent the Fund does so, the Fund is more vulnerable to adverse market, economic, regulatory, political or other developments affecting that industry or group of related industries than a fund that invests its assets more broadly. As of July 29, 2022, the Fund’s investments are concentrated in securities issued by companies in the Capital Markets Industry, an industry within the Financials Sector. As a result of the Fund’s concentration in the Capital Markets Industry, the Fund is subject to the risks associated with that Industry.
- Global financial markets and economic conditions have been, and may continue to be, volatile due to a variety of factors, including significant write-offs in the Financials Sector. In particular, concerns about the general stability of financial markets and specifically the solvency of lending counterparties, may impact the cost of raising capital from the credit markets through increased interest rates, tighter lending standards, difficulties in refinancing debt on existing terms or at all and reduced, or in some cases ceasing to provide, funding to borrowers.
- **Currency Exchange Rate Risk.** The Fund may invest a relatively large percentage of its assets in investments denominated in non-U.S. currencies or in securities that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund’s investment and the value of your Shares. Currency exchange rates

can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, the Sub-Adviser and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, the Sub-Adviser or the Fund’s other service providers, market makers, Authorized Participants (“APs”) or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund’s business operations, potentially resulting in financial losses to the Fund and its shareholders.
- **Depository Receipt Risk.** Depository Receipts involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depository Receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares (“Underlying Shares”). When the Fund invests in Depository Receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the Depository Receipts may not provide a return that corresponds precisely with that of the Underlying Shares.
- **Emerging Markets Risk.** The Fund may invest in companies organized in emerging market nations. Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares and cause the Fund to decline in value.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **ETF Risks.** The Fund is an ETF, and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund may trade on foreign exchanges that are closed when the Fund’s primary listing exchange is open, the Fund is likely to experience premiums or discounts greater than those of domestic ETFs.
 - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Foreign Securities Risk.** Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when the Fund does not

price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Shares. Conversely, Shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.

- **Frontier Markets Risk.** Certain foreign markets are only in the earliest stages of development and may be considered "frontier markets." Frontier financial markets generally are less liquid and more volatile than other markets, including markets in developing and emerging economies. Securities may have limited marketability and be subject to erratic price movements. Frontier markets may be impacted by political instability, war, terrorist activities and religious, ethnic and/or socioeconomic unrest. These and other factors make investing in frontier market countries significantly riskier than investing in developed market or emerging market countries.
- **Geographic Investment Risk.** To the extent that the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region. For example, political and economic conditions and changes in regulatory, tax, or economic policy in a country could significantly affect the market in that country and in surrounding or related countries and have a negative impact on the Fund's performance. Currency developments or restrictions, political and social instability, and changing economic conditions have resulted in significant market volatility.
 - *Risks of Investing in Canada.* The Fund may have significant exposure to issuers operating and/or organized in Canada, and, as a result, investment results could be dependent on the financial condition of the Canadian economy. The Canadian economy is reliant on the sale of natural resources and commodities, which can pose risks such as the fluctuation of prices and the variability of demand for exportation of such products. Changes in spending on Canadian products by the economies of other countries or changes in any of these economies may cause a significant impact on the Canadian economy.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective based on the Adviser's success or failure to implement investment strategies for the Fund. The Adviser's evaluations and assumptions regarding issuers, securities, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.
- **Market Capitalization Risk.**
 - *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
 - *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole.
 - *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.

- **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.
 - *Communication Services Sector Risk.* Market or economic factors impacting communication services companies and companies that rely heavily on technological advances could have a major effect on the value of the Fund’s investments. The value of stocks of communication services companies and companies that rely heavily on technology is particularly vulnerable to research and development costs, substantial capital requirements, product and services obsolescence, government regulation, and domestic and international competition, including competition from foreign competitors with lower production costs. Stocks of communication services companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Additionally, companies in the communication services sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel. While all companies may be susceptible to network security breaches, certain companies in the communication services sector may be particular targets of hacking and potential theft of proprietary or consumer information or disruptions in service, which could have a material adverse effect on their businesses.
 - *Financials Sector Risk.* Performance of companies in the Financials Sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.
 - *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund’s investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund’s website at www.horizonkinetics.com/products/etf/BCDF.

Portfolio Management

Adviser	Horizon Kinetics Asset Management LLC
Portfolio Managers	Murray Stahl, Chairman and Chief Investment Strategist, Steven Bregman, President, Peter B. Doyle, Managing Director, James Davolos, Portfolio Manager, and Brandon Colavita, Vice President, have been the portfolio managers of the Fund since its inception in July, 2022

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.horizonkinetics.com/products/etf/BCDF.

Tax Information

The Fund’s distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.
