

Horizon Kinetics SPAC Active ETF (SPAQ)

Listed on The Nasdaq Stock Market, LLC

Summary Prospectus dated April 30, 2023

Before you invest, you may want to review the Fund’s prospectus and Statement of Additional Information (“SAI”), which contain more information about the Fund and its risks. The current Prospectus and SAI dated April 30, 2023, are incorporated by reference into this Summary Prospectus. You can find the Fund’s Prospectus, reports to shareholders, and other information about the Fund online at www.horizonkinetics.com/products/etf/SPAQ. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

Horizon Kinetics SPAC Active ETF (“SPAC ETF” or the “Fund”) seeks to generate realized capital gains in excess of short-term interest rates on a risk adjusted basis.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fee	0.85%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses*	0.85%

* Restated to reflect the Fund’s current unified management fee as if it had been in effect during the previous fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$87 **3 Years:** \$271

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund reorganized following the most recent fiscal year end, portfolio turnover information has been omitted.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that pursues its investment objective primarily by investing, under normal circumstances, in special purpose acquisition companies (“SPACs”) that Ryan Heritage, LLP, the Fund’s investment sub-adviser (the “Sub-Adviser”), believes will generate net realized capital gains in excess of the income derived from bank certificates of deposit with similar maturities.

A SPAC (also known as a “blank check” company) is an investment vehicle with no commercial operations that is designed to raise capital via an initial public offering (“IPO”) for the purpose of engaging in a merger, acquisition, reorganization, or similar business combination (a “Combination”) with one or more operating companies to be identified subsequent to the SPAC’s IPO. SPACs are often used as a vehicle to transition a company from private to publicly traded as an alternative to a more traditional direct IPO by a private company. Unless and until Combination is completed, a SPAC generally places a minimum of the total amount of cash raised in the IPO in a trust account that invests such cash in U.S. government securities or money market funds. A SPAC sponsor generally has 24 months (or less) to find an acquisition target, secure shareholder approval, and complete the Combination. Prior to consummation of a Combination, the SPAC’s shares trade in the market at prices that may be below or above the per share value of

the trust account. If a Combination is not consummated within the allowed time span, the SPAC is automatically liquidated and the cash value, after any applicable taxes, fees, and administrative expenses, of the SPAC trust is distributed to shareholders. If a Combination is proposed, shareholders can (1) continue to hold onto their shares (which then bear the risks associated with all equity securities) or (2) redeem their shares for the pro rata value of the cash value of the trust. The Sub-Adviser believes SPACs offer upside potential when sold after an attractive Combination announcement, coupled with one or more redemption options, such as when the Fund is permitted to exit a SPAC prior to the completion of a Combination without loss of the principal it invested in the SPAC, thus providing a true asymmetric risk/reward profile for investors. Under normal circumstances, at least 80% of the Fund's net assets, plus borrowings for investment purposes, will be invested in Pre-Combination SPACs, together with the warrants or rights issued in connection with the IPO of Pre-Combination SPACs. A warrant or right is a security that allows its holder to purchase a specified amount of common stock at a specified price for a specified time.

The Fund may maintain during a temporary period, which could be for a short period or a longer period lasting several years or more, of abnormal conditions, a significant portion of its total assets in cash and securities, generally considered to be cash and cash equivalents, including, but not limited to, high quality, U.S. short-term debt securities and money market instruments. The Sub-Adviser will invest in such short-term cash positions to the extent the Sub-Adviser is unable to find sufficient investments meeting its criteria and when the Sub-Adviser believes the purchase of additional equity securities would not further the investment objective of the Fund during such periods of time. The criteria for temporarily investing in cash equivalents is a lack of current investments that the Sub-Adviser believes will generate net realized capital gains in excess of the income derived from bank certificates of deposit with similar maturities. Additionally, to respond to adverse market, economic, political or other conditions, which may persist for short or long periods of time, the Fund may invest up to 100% of its assets in the types of high quality, U.S. short-term debt securities and money market instruments described above.

If the market advances during periods when the Fund is holding a large cash position, the Fund may not participate in the positive performance as much as it would have if it had been more fully invested in securities. In the aforementioned temporary defensive periods, the Sub-Adviser believes that an additional amount of liquidity in the Fund is desirable both to meet operating requirements and to take advantage of new investment opportunities. When the Fund holds a significant portion of assets in cash and cash equivalents, it may not meet its investment objective.

The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Associated Risks of Pre-Combination SPACs.** "Pre-Combination" SPACs are SPACs that are either seeking a target for a Combination or have not yet completed a Combination with an identified target. Pre-Combination SPACs often have predetermined time frames to consummate a Combination (typically, two years) or the SPAC will liquidate. A Pre-Combination SPAC may extend the time to consummate a Combination. The Fund invests in equity securities including common stock, rights and warrants of SPACs, which raise cash to seek potential Combination opportunities. Unless and until a Combination is completed, substantially all of the cash raised by a SPAC is deposited in a trust account that generally invests its assets in U.S. government securities, money market securities, and cash. Because SPACs have no operating history or ongoing business other than seeking Combinations, the value of their securities is particularly dependent on the ability of the entity's management to identify and complete a Combination that investors find attractive. There is no guarantee that the SPACs in which the Fund invests will complete a Combination or that any Combination that is completed will be attractive to investors. Some SPACs may pursue Combinations only within certain industries or regions, which may affect the volatility of their prices. A SPAC may restrict holders from redeeming more than a certain percentage of the outstanding public shares to discourage holders from accumulating large blocks of shares. While the terms of warrants issued by SPACs will vary, to the extent warrants are exercisable prior to a business combination, the holders of a SPAC's common stock may be subject to dilution which could reduce the holder's proportional ownership in the SPAC.
- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, the Sub-Adviser and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, the Sub-Adviser or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.

- **Equity Market Risk.** The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.
- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund may trade on foreign exchanges that are closed when the Fund’s primary listing exchange is open, the Fund is likely to experience premiums or discounts greater than those of domestic ETFs.
 - *Trading Risk.* Although Shares are listed for trading on The Nasdaq Stock Market, LLC (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Liquidity Risk.** Liquidity risk refers to the possibility that a Fund may not be able to sell or buy a security or close out an investment contract at a favorable price or time. Consequently, a Fund may have to accept a lesser price to sell a security, sell other securities to raise cash, or give up an investment opportunity, any of which could have a negative effect on a Fund’s performance. Infrequent trading of securities also may lead to an increase in their price volatility.
- **Management Risk.** The Fund is actively managed and its ability to achieve its investment objective is dependent on the Sub-Adviser’s successful implementation of the Fund’s investment strategies.
- **Market Capitalization Risk.**
 - *Mid-Capitalization Investing Risk.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
 - *Small-Capitalization Investing Risk.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia’s invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. It is unknown how long circumstances related to the COVID-19 pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may

follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **New Strategy Risk.** The Fund may not be successful in implementing its new investment strategy, and its investment strategy may not be successful under all future market conditions, either of which could result in the Fund being liquidated at some future time without shareholder approval and/or at a time that may not be favorable for certain shareholders. New strategies may not attract sufficient assets to achieve investment, trading or other efficiencies.
- **Non-Diversification Risk.** Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its portfolio frequently, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover (*e.g.*, in excess of 100% per year) may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders.
- **Temporary Defensive Position Risk.** If the Fund takes a temporary defensive position, it may invest all or a large portion of its assets in cash and/or cash equivalents. If the Fund takes a temporary defensive position, it may not achieve its investment objective.
- **Warrants and Rights Risk.** The Fund may receive warrants or rights in connection with purchasing equity securities, specifically SPAC Units. Investments in warrants or rights are pure speculation in that they have no voting rights, pay no dividends and have no rights with respect to the assets of the corporation issuing them. They do not represent ownership of the securities, but only the right to buy them. Warrants and rights also are complex financial instruments. Their prices do not necessarily move parallel to the prices of underlying securities and their accounting treatment and valuation is subject to special considerations making them more prone to errors than less complex financial instruments. For example, determining whether warrants should be treated as equity or an asset or liability of the SPAC entity depends not only on the specific terms of the warrant contract, but also on the SPAC entity’s specific facts and circumstances. Warrants and rights are also subject to the risk that the Fund could lose the purchase value of the warrant if the warrant is not exercised or sold prior to its expiration. They also involve the risk that the effective price paid for the warrant or right added to the subscription price of the related security may be greater than the value of the subscribed security’s market price. If the Fund holds warrants or rights associated with a SPAC that does not complete a business combination within the designated time period, the warrants or rights held by the Fund will expire and lose all value.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund’s website at www.horizonkinetics.com.

Portfolio Management

Adviser	Horizon Kinetics Asset Management LLC (the “Adviser”)
Sub-Adviser	Ryan Heritage, LLP
Portfolio Managers	Philip Goldstein, Partner of the Sub-Adviser, Andrew Dakos, Partner of the Sub-Adviser, and Rajeev Das, Principal of the Sub-Adviser, have been the portfolio managers of the Fund since its inception in January, 2023

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.horizonkinetics.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
